

Practical No. 6 - Create textbox and submit button of event handling submit form: using ajax.

Name of Programmer – Vishal Pravin Jatti

Roll No. – 26

Code:

```
<!Doctype html>
<html>
<head>
    <title>JQuery AJAX Call</title>
    <!--Include JQuery Library -->
    <script src="https://code.jquery.com/jquery-3.5.0.js">
    </script>
    <script>
        // When DOM is loaded this
        // function will get executed
        $(() => {
            // function will get executed
            // on click of submit button
            $("#submitButton").click(function (ev) {
                var form = $("#formId");
                var url = form.attr('action');
                $.ajax({
                    type: "POST",
                    url: url,
                    data: form.serialize(),
                    success: function (data) {
                        // Ajax call completed successfully
                        alert("Form Submitted Successfully");
                    },
                    error: function (data) {
                        // Some error in ajax call
                        alert("some Error");
                    }
                });
            });
        });
    </script>
</head>
<body>
    <form id='formId' action=''> Name:
        <input type='text' id='nm' name='nm'>
        </input>
        <br> Student ID:
        <input type='text' id='studentId' name='studentId'>
        </input>
        <br> Contact No. :
        <input type='text' id='contactNumber' name='contactNumber'>
        </input>
```

```
        <br>
        <button type='submit' id='submitButton'>
            Submit
        </button>
    </form>
</body>
</html>
```

Output:
