  <title>PHP Form Handling</title>
</head>
<body>
<h2>PHP Form Handling</h2>
<form method="post" action="process_form.php">
  <label for="name">Name:</label>
  <input type="text" id="name" name="name"><br><br>
  <label for="email">Email:</label>
  <input type="email" id="email" name="email"><br><br>
  <label for="age">Age:</label>
  <input type="number" id="age" name="age"><br><br>
  <input type="submit" value="Submit">
</form>
</body>
</html>
Php file process_form.php
<?php
// PHP Form Validation and Sanitization
// Initialize variables
$name = $email = $age = ";
// Form validation and sanitization function
function sanitizeInput($data) {
  $data = trim($data);
  $data = stripslashes($data);
  $data = htmlspecialchars($data);
  return $data;
}
if ($_SERVER["REQUEST_METHOD"] == "POST") {
```

```
// Validate and sanitize name
  if (empty($_POST["name"])) {
    echo "Name is required <br>";
  } else {
    $name = sanitizeInput($ POST["name"]);
    // Check if name contains only letters and whitespace
    if (!preg_match("/^[a-zA-Z]*$/", $name)) {
      echo "Only letters and white space allowed for name <br>";
    }
  }
  // Validate and sanitize email
  if (empty($_POST["email"])) {
    echo "Email is required <br>";
    $email = sanitizeInput($_POST["email"]);
    // Check if email address is valid
    if (!filter_var($email, FILTER_VALIDATE_EMAIL)) {
      echo "Invalid email format <br>";
    }
  }
  // Validate and sanitize age
  if (empty($_POST["age"])) {
    echo "Age is required <br>";
    $age = sanitizeInput($_POST["age"]);
    // Check if age is a number
    if (!is_numeric($age)) {
      echo "Age must be a number <br>";
    }
 }
?>
```

Output:

Only letters and white space allowed for name
